ISO CERTIFIED CO.

# Drum Mix Plant Manufacture: A Buyer's Guide for Road Construction Projects

**By Vishwakarma Engineering Works**

At Vishwakarma Engineering Works, we manufacture road construction machinery for contractors and infrastructure businesses. If you are looking for **Drum Mix Plant Manufacture** solutions, understanding the plant's working process, technical specifications and project requirements can help you make a better purchase decision. This guide covers our Asphalt Drum Mix Plant DM50, important points to check before buying and questions to discuss with a manufacturer.

### Key Takeaways

- Check the plant's technical specifications before placing an order.
- Match production capacity to your project requirements.
- Understand the feeding, heating, mixing and discharge process.
- Confirm electrical requirements, fuel arrangements and installation needs.
- Request a quotation based on your intended application.

## Understanding a Drum Mix Plant

A drum mix plant produces hot mix asphalt used in road construction and surfacing work. It processes aggregates, heats and dries the material, and mixes it with bitumen to produce asphalt mix.

The quality of the final mix depends on several factors, including aggregate moisture, material proportions, heating conditions and bitumen addition. Correct operating settings and proper material handling are important throughout production.

Before choosing a plant, buyers should consider the type of road project, expected material demand, site conditions and available utilities. A clear understanding of these requirements helps when comparing equipment and discussing a suitable configuration with the manufacturer.

## Asphalt Drum Mix Plant DM50: Technical Specifications

Vishwakarma Engineering Works offers the Asphalt Drum Mix Plant DM50. The available product details are listed below.

| Technical detail | Specification |
|---|---|
| **Product name** | Asphalt Drum Mix Plant DM50 |
| **Brand** | Vishwakarma |
| **Automation grade** | Automatic |
| **Phase** | Three |
| **Power consumption** | 1 kW |
| **Control panel** | Provided |
| **Fuel tank** | Provided |

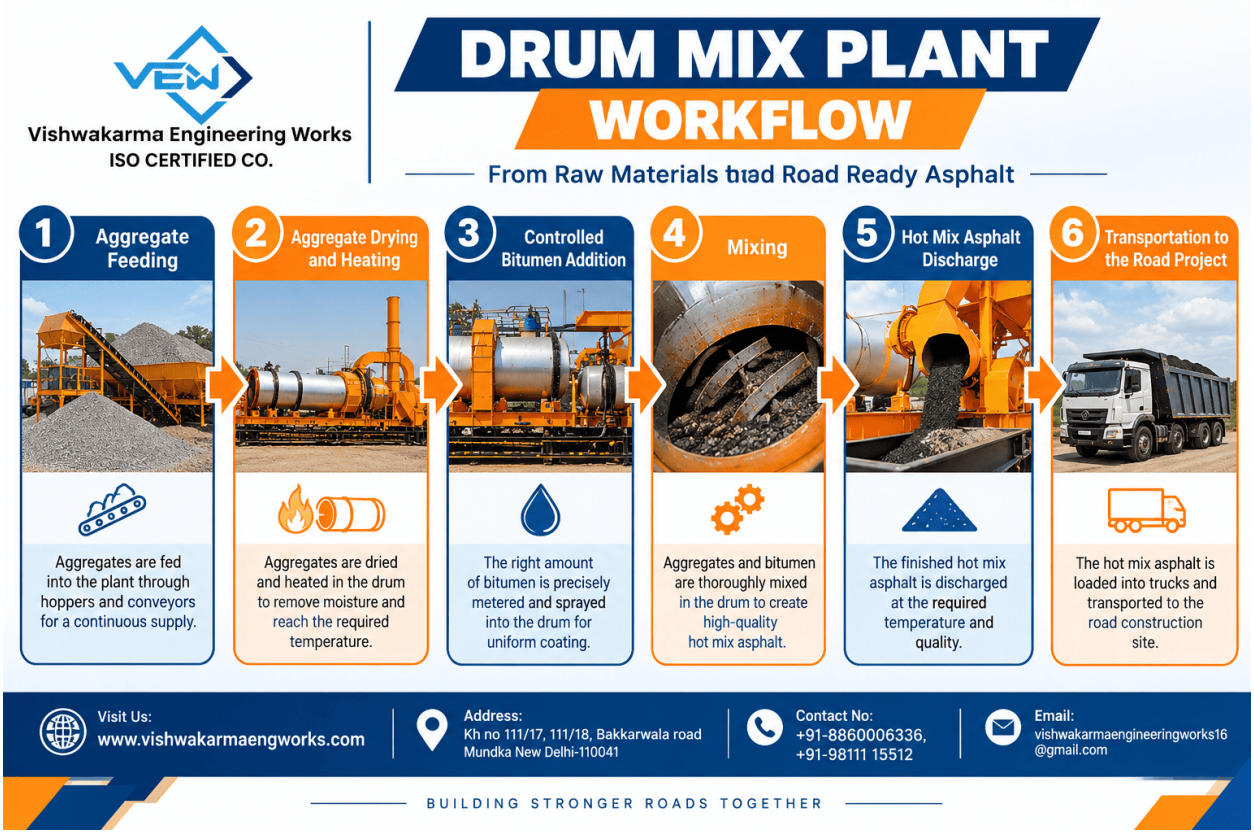

These specifications reflect the product information supplied for the DM50. Buyers should confirm the complete electrical requirements, production capacity, burner details and fuel consumption with our team before finalizing an order.

The control panel supports plant operation, while the fuel tank forms part of the listed equipment. The exact configuration and scope of supply should be confirmed in the final quotation.

## How Does a Drum Mix Plant Work?

A drum mix plant follows a series of connected steps to produce hot mix asphalt. The exact arrangement may depend on the plant configuration.

### Drum Mix Plant Workflow

**Aggregate feeding:** Aggregates enter the plant for processing.

**Drying and heating:** The material is dried and heated under the required operating conditions.

**Bitumen addition:** Bitumen is added in a controlled manner according to the required mix design.

**Mixing:** Aggregates and bitumen are mixed to produce the required asphalt material.

**Discharge and transportation:** The finished mix is discharged and transported to the work site for laying.

Correct operation at each stage helps maintain consistency. Operators should follow the plant's operating instructions and the requirements of the approved asphalt mix design.

## What Should You Check Before Buying?

Choosing a drum mix plant involves more than comparing product names. Review the following points before making a purchase.

**Production capacity:** Confirm the required output in tonnes per hour (TPH). Ask for the rated capacity and the conditions under which it is achieved.

**Fuel requirements:** Discuss the burner type, compatible fuel and expected consumption. Request figures for the specific plant configuration.

**Electrical requirements:** Confirm the power supply, connected load and electrical arrangements needed at your site.

**Material requirements:** Discuss aggregate sizes, moisture levels, bitumen requirements and the type of asphalt mix required for your project.

**Installation and maintenance:** Check site preparation, equipment access, routine servicing and spare-part availability.

**Technical support:** Ask what installation guidance, operating instructions and after-sales support are included in the offer.

For buyers comparing different asphalt production options, our **Asphalt Hot Mix Plant** range is another option to discuss with our team.

## Expert Insight: Compare the Same Specifications

When reviewing quotations, use the same checklist for every supplier. Compare rated capacity, power requirements, burner details, included components and support arrangements. A lower purchase cost does not automatically mean lower operating costs. Ask for written technical details so you can compare the proposed equipment fairly.

## Comparing Plant Options Before Purchase

Different plant configurations may suit different project requirements. Use this table as a starting point, then compare the specifications of the actual models being offered.

| Buying consideration | Drum Mix Plant | Mobile Hot Mix Plant |
|---|---|---|
| **Main purpose** | Production of hot mix asphalt | Production of hot mix asphalt |
| **Site planning** | Check installation space and site requirements | Check mobility and site requirements |
| **Production capacity** | Confirm the rated output | Confirm the rated output |
| **Operating needs** | Verify fuel, power and maintenance requirements | Verify fuel, power and maintenance requirements |
| **Selection priority** | Match the configuration to the project | Match the configuration to the project |

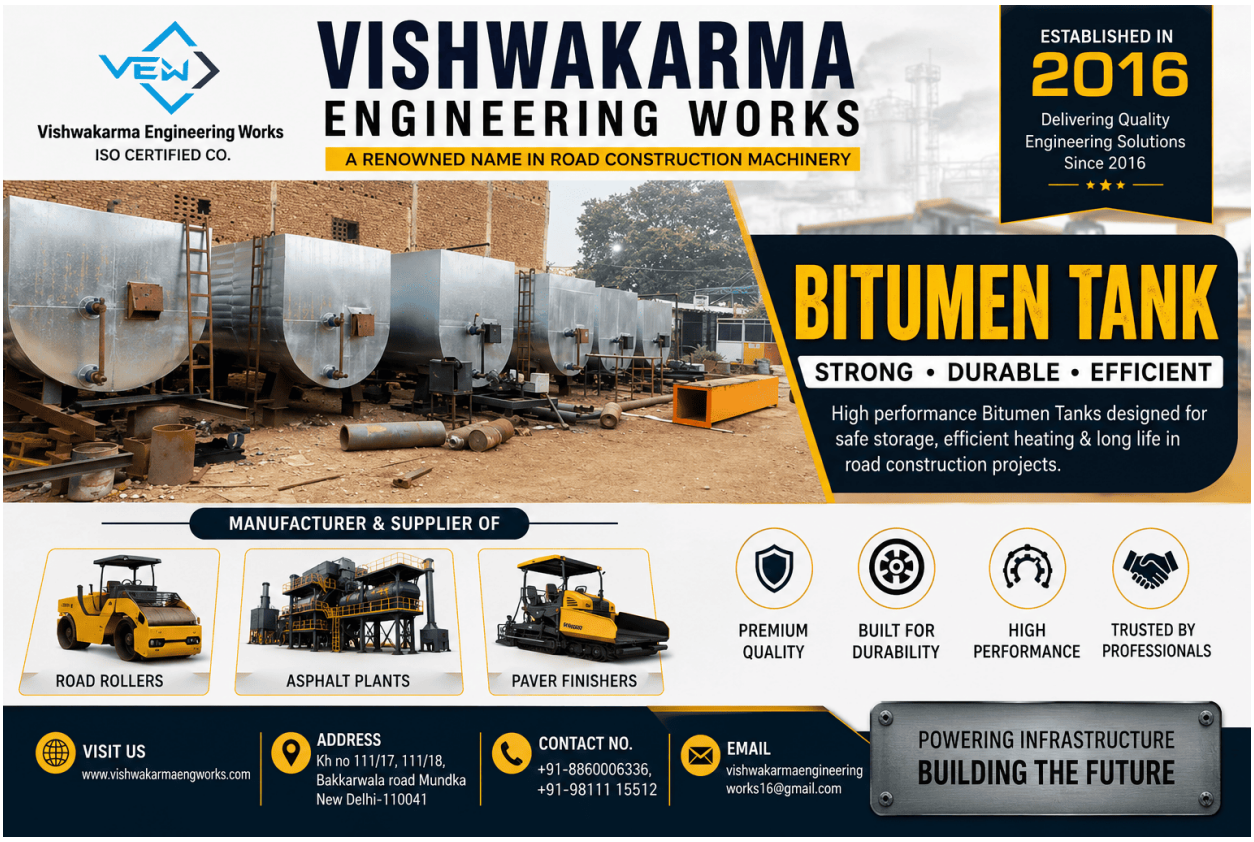

The table highlights questions to ask rather than claiming that one plant is always better than the other. The right choice depends on the project, site conditions and confirmed technical specifications.

If your project requires a mobile setup, explore our **Mobile Hot Mix Plant** and discuss its available configuration with our team.

## Plan Your Supporting Road Construction Equipment

Asphalt production is one part of road construction. Contractors may also need equipment for bitumen storage and road compaction.

A [Bitumen Tank] may be required for projects that need bitumen storage. Before selecting a tank, confirm the required capacity, heating arrangements and site requirements.

After asphalt is laid, suitable compaction equipment is needed to complete the road surface. Review our **Road Roller** range according to your project and compaction requirements.

Planning supporting equipment early can help you organise the site, material movement and project operations more effectively.

## About Vishwakarma Engineering Works

Established in New Delhi in 2016, Vishwakarma Engineering Works manufactures, wholesales and retails road construction machinery, including road rollers, paver finishers, hot mix plants, asphalt plants, WMM plants and bitumen sprayers.

We work with buyers who need machinery for infrastructure and highway construction projects. Our approach is to understand the buyer's requirements and discuss the relevant equipment details before an order is finalized.

Learn more about us as a **Road Construction Machine Manufacturer in India**. Before purchasing a drum mix plant, ask for the latest technical specification and confirm the scope of supply, installation requirements and available support.

## Frequently Asked Questions

### 1. What is a drum mix plant used for?

It is used to produce hot mix asphalt for road construction and surfacing projects.

### 2. What is the automation grade of the DM50?

The supplied product information lists the DM50 as an automatic plant.

### 3. What phase is listed for the DM50?

The listed electrical phase is three-phase. Confirm the complete electrical requirements before installation.

### 4. What is the listed power consumption of the DM50?

The supplied product details list power consumption as 1 kW.

### 5. How do I choose the right plant capacity?

Estimate your project's material demand and schedule, then confirm the plant's rated output with the manufacturer.

### 6. How can I request a quotation?

Contact Vishwakarma Engineering Works and share your project location, application and required production capacity.

## Contact Vishwakarma Engineering Works

Planning to purchase a drum mix plant for your road construction project? Contact **Vishwakarma Engineering Works** to discuss your requirements and request product information.

**Address:** Kh no 111/17, 111/18, Bakkarwala road Mundka New Delhi-110041
**Contact numbers:** +91-8860006336, +91-98111 15512
**Email:** vishwakarmaengineeringworks16@gmail.com

Share your project requirements with us so we can discuss the relevant equipment specifications and quotation details.
